

Stackup Proposal Architecture (Final Version)

Rule #1: Opening Line

Always start with “Understood.” If the client specifies a starting word, use that instead. Keep tone human and natural, not AI-like.

Paragraph 1: Problem Statement (20–30 words)

Clearly show understanding of the client’s problem. Reflect system complexity, pain points, and inefficiencies. Imply confidence in delivering the exact solution.

Paragraph 2: Sample Work Mention (20–30 words)

Use “I’ve built...” (not “we”). Mention two relevant projects aligned with the client’s problem to establish credibility quickly.

Paragraph 3: Sample Work #1 (~50 words)

Structure: Project title, link, and conversational explanation starting with “In [Project], I have built...”. Clearly connect your implementation with the client’s requirements.

Paragraph 4: Sample Work #2 (~50 words)

Same structure as Paragraph 3. Maintain clarity, relevance, and direct alignment with the client’s needs.

Paragraph 5: Approach (~50 words)

Explain your technical and execution approach. Include tools, APIs, webhooks, and workflow structure. Keep it concise, execution-focused, and within 45–55 words.

Paragraph 6: CTA (7–10 words)

Short, direct, and action-driven closing line such as “Let’s finalize workflow and start implementation.”

Closing Format

Best regards, [Your Name] [GitHub Link]

Critical Rules

- 1 Use human, natural tone. Avoid robotic phrasing.
- 2 Always use “I”, never “we”.
- 3 Ensure every line aligns with the client’s requirement.
- 4 Explicitly show how your sample work matches the client’s needs.
- 5 Avoid fluff. Keep everything concise and valuable.

Final Checklist

- 1 Starts with “Understood” or client keyword
- 2 Problem clearly defined
- 3 Relevant sample works included
- 4 Clear matching of features to requirements
- 5 Approach within ~50 words
- 6 Tone is human and direct
